                                                                                                         C-delta-1 polypeptide (AAW00876) is the chick homologue of Drosophila Delta, a protein that binds to Notch protein. Expression of C-Delta-1 correlates with onset of neurogenesis. The C-delta-1 amino acid sequence was deduced from a cDNA clone (AAT58898) obtd. from chick stage 4-6 embryos. A shorter version (AAW58877) of C-Delta-1, lacking the 12 C-terminal amino acids of the longer version, was also isolated, and mouse (AAW11720) and human (AAW11721- 38) Delta-1 polypeptides have been identified. Delta-1 proteins can be used to treat or prevent disorders characterised by increased Notch activity, such as cervical, breast, lung or colon cancer, melanoma or seminoma, and nervous system disorders or to promote tissue regeneration and repair
                                                                                                                                                                                                                                                                                           130

Delta, a protein that binds to Notch protein. Expression of C-Delta-1 correlates with onset of neurogenesis. The C-delta-1 amino acid sequence was deduced from a cDNA clone (AAT58897) obtd. from chick stage 4-6 embryos. An alternatively spliced variant (AAW00876) was also isolated, and mouse (AAW11720) and human (AAW11721- 38) Delta-1 polypeptides have been identified. Delta-1 proteins can be used to treat or prevent disorders characterised by increased Notch activity, such as cervical, breast, lung or colon cancer, melanoma or seminoma, and nervous system disorders or to promote tissue regeneration and repair
                                                                                                                                                                                                                                                                             CPC-NGAT
                                                                                                                                                                                                                                                                                                                         ||||||||

for diagnosis, nervous system, and antibodies useful disorders of central a New cleavage peptide, nucleic acids prevention and treatment of cancer, cirrhosis and psoriasis.

3; 177pp; English Claim 1; Fig

Units sequence represents the chack accelin anno acid sequence.

Delta is a toporythmic protein that contains a sequence which is cleaved by the metalloprotease-disintigrin Kuzbanian (Kuz). Cleavage by Kuz results in two fragments a soluble amino terminal fragment consisting casantially of the extracellular domain, and a membrane bound fragment consisting of the transmembrane domain, and a membrane bound fragment of differentially of the transmembrane domain and the intracellular domain. The soluble fragment is abbt to bind to Notch. Delta plays a key role in differentiation, and therefore detection and measurement of delta activation is important in the study of differentiation. The invention relates to the delta cleavage peptides (the activation. Delta cleavage peptides and chimeric proteins are useful for modulating the activity of methods for detecting and measuring delta activation. Delta cleavage peptides, and chimeric proteins are useful for modulating the activity of or organism, expressing Norch. We contacting a cell with kuz protein or nucleic acid or its antibody, the activity or levels of delta protein is or organism, expressing the artivity or levels of delta protein is modulated and vice versa. A delta cleavage peptide or its derivative capable of binding kuz protein is useful for treating or preventing a disease or disorder associated with increased delta activity or expression such as cervical, breast, colon or lung cancer, melanoma or seminoma in humans. A recombinant cell comprising a delta protein binding activity or protein and kuz is useful for the diagnosis of disease or clasventing the ability of delta cleavage peptide is useful for the diagnosis of disease or disorder associated with increased levels of or predisposition to developing a disease or disorder associated with aberrant levels of the complex, comprising measuring the ability of delta cleavage peptide is useful for the diagnosis of disease or disorder associated with aberrant levels of complex, complex, comprising delta or prom delta protein amino acid sequence. : contains a sequence which is cleaved This sequence represents the chick

This sequence represents the murine delta protein amino acid sequence. Delta is a toporythmic protein that contains a sequence which is cleaved by the meteralloprotease-dishintigrin (Kuzbanian (Kuz). Cleavage by Kuz results in two fragments, a soluble amino terminal fragment consisting essentially of the extracellular domain, and a membrane bound fragment consisting creatist transmembrane domain and the intreacellular domain. The consisting of the transmembrane domain and the intreacellular domain. The soluble fragment is able to bind to Notch. Delta plays a key role in differentiation, and therefore detection and measurement of delta activation is important in the study of differentiation. The invention relates to the delta cleavage peptides (the active fragment), and to methods for detecting and measuring delta activation. Delta cleavage peptides, and chimmeric proceins are useful for modularing the activity of notch, delta or kuz or at least one of the signalling pathways in a cell notch, delta or kuz or at least one of the signalling pathways in a cell conclet cand or its antibody, the activity or levels of delta protein is modulated and vice versa. A delta cleavage peptide or its derivative modulated and vice versa. A delta cleavage peptide or its derivative capable of binding kuz protein is useful for treating or preventing a disease or disorder associated with increased delta activity or expension such as cervical, breast, colon or lung cancer, melanoma or seminoma in humans. A recombinant cell comprising a delta peptide is useful for the diagnosis of diseases or disorders associated with increased levels of delta cleavage peptide is useful for the diagnosis of delta cleavage peptide is useful for the diagnosis of delta cleavage peptide is useful for the diagnosis of delta cleavage peptide is useful for the presence of, or predisposition to complex, comprising measuring the ability of delta cleavage peptide is useful for the presence of, or predisposition to complex, comprising measuring the period of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   209
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               317

The invention relates to modulating the differentiation of an embryonic stem cells, comprising; (a) providing a culture of embryonic stem cells, (b) providing at least one ligand or its active binding fragment, capable of binding its coprate receptor polypeptide expressed by the embryonic stem cells and the ligand; and (d) growing a culture comprising embryonic stem cells and the ligand call fransfered with a nucleic acid molecule selected from: of embryonic stem cells, (i) forming a culture comprising embryonic stem cells and the providing a cell fransfered with a nucleic acid molecule selected from: of embryonic stem cells, (ii) any office of the mucleic acid molecule selected from: of embryonic stem cells and the dight seek to the mucleic acid selected from: of capable of modulating embryonic stem cell dight capable of binding a writ receptor; or (iii) nucleic acid molecules which are degenerate as a result of the genetic code to the abunceance and/or differentiation of the embryonic stem cells, or (ii), by forming a culture comprising the cell identified in (a) with an embryonic stem cells, (b) forming a culture for the maintenance and/or differentiation of the embryonic stem cell; (a) Inhibiting the differentiation of embryonic stem cell; and (c) growing the cell identified in (a) with an embryonic stem cell; and (c) growing the cell; dentified in (a) much an embryonic stem cell; and (c) drowing the cell; dentified in (a) much an embryonic stem cell; and (c) drowing the cell; dentified in (a) much and cells and molecule selected from; (i) a molecule become a polypeptide or itse active comprising the cell; and molecule selected from; (i) a molecule by onlypeptide capable of inhibiting which signalling.

C (i) and encodes a polypeptide capable of inhibiting with an embryonic stem cell; and (ii) and encodes a polypeptide capable of inhibiting with an embryonic stem cell; dentified in (a) with an embryonic stem cell; dentified or (d) growing the cellidentified in (a) with an embryonic stem cell; dentified or (
Notch; Wnt; embryonic stem cell; embryogenesis; human; differentiation; ligand; Parkinson's disease; Huntington's disease; motor neuron disease; heart disease; diabetes; liver disease; cirrhosis; renal disease; AIDS; acquired immunodeficiency syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       providing

                                                                                                                                                                                                                                                                                                                                  CCCCXSXTTXBXBXBXBXBXBXLTTTTXCXXXXXBXBXBXCCCCXSXXXXXXBXBXBXBX
                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                      The present invention relates to a novel screening method which enables
the identification of biologically active agents which mediate their
effect through the activation of genes. The method involves providing a
copulation of cells stably transfected with a nucleic acid encoding a
reporter molecule, cloning the transfected cells into a cell array,
coposing the array to at least one agent to be tested and detecting a
signal generated by the reporter molecule as a result of exposure to the
agent. The method is useful in identifying biologically active agents and
the genes through which the agents act, in screening potential drugs for
their ability to activate certain drug targets in a high-throughput
assay, in identifying relationships between signalling pathways and
specific signals that could be useful in eventually directing the
differentiation of embryonic stem cells and in toxicology assays by
testing for unwanted activation or inhibition of specific signalling
pathways. The present sequence is murine notch ligand delta-like I
protein used to illustrate the method of the invention

458 420 540 720 503 Proliferation; differentiation; suppression; human; delta-1; serrate-1; blood cell; neuron; leukaemia; malignant tumour; immunosuppression. The present sequence represents a polypeptide which suppresses proliferation and differentiation of undifferentiated cells such as neurons and blood cells. The polypeptide may be used for the prevention and control of disorders involving undifferentiated cells, such as cella --FPW-AVCAGLV---LLLLGCAA-VVCVRLK-QK----PE-C--ETETMNNLANCQREK --VHKK --EEO-Peptide(s) encoded by human genes delta-1 and serrate-1 - suppress proliferation and differentiation of undifferentiated human blood VSRCEH-PCHNGATCHRR----YCECA-GYGG-NCQFLLPE-PPGP--VD----Differentiation_suppression_protein --KVRYP-VDYNLV--LK--Proliferation and differentiation suppression polypeptide

                                                                                                                                                                                                This sequence represents the human delta-1 protein, which is a ligand the human notch protein. The protein or fragments, especially AAW75493. W75495, can be used as a drug to control vascular cells. The sequences were isolated and the truncated fragments were generated using the primers AAX16818-X16831
                                                                                                                                                                 human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes full length and shortened human proteins. Human delta-2 is a differentiation inhibitor which in differentiation of undifferentiated cells (other than brain or cells), such as blood cells, and enhances the proliferation of undifferentiated blood cells. Products of human delta-2 may be the treatment of diseases such as leukaemia and malignant tumou may also be used in the culture of human cells in vitro, e.g. f production of supplies of undifferentiated blood cells. The pre sequence represents human delta-1, from an example of the prese

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, idiopathic inflammatory myopathies, Sjogren's systemic sclerosis, idiopathic inflammatory myopathies, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central and peripheral nervous systems, hepatobiliary diseases of the central and clisease, gluten-sensitive enteropathy and Whipple's disease, autoimmune or immune-mediated skin diseases, allergic diseases, inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's disease, autoimmune or immune-mediated skin diseases, allergic diseases, inflammatory and transplantation associated diseases including graft rejection and graft-versus-host-disease. AAC58397 to AAC58378 represent PCR primers and hybridisation probes used in the isolation of human PRO sequences. AAC58642 and AAB33414 to AAB33477 represent human PRO polynucleotide and protein sequences given in the cremplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              es, useful in the diagnosis and treatment of e.g. systemic lupus erythematosis, rheumatoid thyroiditis and diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Henzel

The present invention describes nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorder in mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCs) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA77721 and AAB24338 to AAB24435 represent nucleotide and protein sequences used in the exemplification of the

consisting of the transmembrane domain and the intracellular domain. The soluble fragment is able to bind to Notch. Delta plays a key role in differentiation, and therefore detection and measurement of delta activation is important in the study of differentiation. The invention relates to the delta cleavage peptides (the activation. Delta cleavage peptides, and chimeric proteins are useful for modulating the activity of peptides, and chimeric proteins are useful for modulating the activity of peptides, and chimeric proteins are useful for modulating the activity of norch, delta or kuz or at least one of the signalling pathways in a cell or or organism, expressing Notch. By contacting a cell with kuz protein or nucleic acid or its antibody, the activity or levels of delta protein is andulated and vice versa. A delta eleavage peptide or its derivative capable of binding kuz protein is useful for treating or preventing useful for treating or preventing central nervous system disorders. A delta cleavage peptide is useful for the diagnosis of diseases or disorder associated with increased levels of Notch-delta protein binding useful for treating or preventing central nervous system disorders. A disorders associated with increased levels of Notch-delta protein binding activity comprising measuring the ability of delta cleavage peptides in a sample to bind kuz protein. A complex of delta protein and kuz is useful for developing a disease or disorder associated with aberrant levels of the complex, comprising measuring the level or functional activity of the complex, comprising measuring the level or functional activity of the complex, comprising measuring the level or functional activity of the complex, comprising measuring the level or functional activity of the complex, comprising each or war in a sample to be peptide is also useful for promoting tissue regeneration and repair, for treating liver cirrhosis, keloid formation, psoriasis, baldness and degenerative or traumatic disorders of the sensory peptide land activ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           67
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         167
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          220
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          132

leukemia and neoplastic for nsefnl PRO538, PRO172 and PRO182 polypeptides use including cancers of the breast and lung, compounds capable of inhibiting growth of rkU211, PRO228, I treating tumors i for identifying c

Claim 31; Fig 8; 133pp; English.

Isolated PRO211, PRO228, PRO538, PRO172 or PRO182 polypeptides or their agonists (preferably anti-PRO agonist antibody or a small molecule mimicking the biological activity of PRO polypeptide) are useful in vitro or in vivo for inhibiting the growth of a tumour cell. Compositions comprising the PRO polypeptides are useful for inhibiting neoplastic cell growth and for treating cancer including breast, ovarian, renal, colorectal, uterine, prostate, lung, bladder, central nervous system cancer, melanoma and leukaemia in a mammal. The PRO polypeptides are also useful for treating other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal, blastocoelic disorders and inflammatory, angiogenic and immunologic disorders as well as being useful for identifying agonists to PRO polypeptides by contacting the polypeptide with a candidate molecule and monitoring biological activity mediated by the polypeptide

US-08-872-855-8

Sequence 8, Application US/08872855

Patent No. 6121045

APPLICANT: McCarthy, Sean
APPLICANT: Gearing, David
TITLE OF INVENTION: THERAPEUTIC USES THEREFOR
TITLE OF INVENTION: HONG & ELIOT LLP
STREET: One Post Office Square
CITY: Boston
STATE: MA
COUNTRY: USA
COUNTRY: USA
COUNTRY: USA
COUNTRY: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/872,855
FILING DATE: 11-UTN-1997
CLASSIFICATION: 514-1997
ATTORNEY/AGENT INFORMATION:
                                                                                                                                                        371
